

GGIS thinks that it's really important for the students to see an organized teacher who is ready for them and she takes the class very seriously from the first day of the year. This is very important as a first sign for the student to feel welcome in the school.

Welcoming strategy for Math "Mrs. Fatema Tharwat"

We believe that learning is an opportunity for both; the students, and the teachers to learn from each other (two-way process). We realized that it's difficult to motivate love for math if there's no enthusiasm behind it. Children love challenges and this can very well be the key factor to get our students hooked on the math subject. In teaching math, motivating our students is our first secret. If we feel positive towards math, it will automatically spell over to them and enthuse them to like it as well. So, get excited about math this year it will be full of challenges and motivation. This year, we will help students to find a good reason why they need to study math and to let them see HOW math will help them to achieve their future goals we will show them that they can be successful in whatever they do. When they feel successful, a new hope will be built to motivate them to do math.

Using curiosity is our second secret in math classes. It will take them up to higher levels and teach them how to understand math concepts. In our classroom environment, the teacher is able to show different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them. The more strategies and approaches that students are exposed to, the deeper their conceptual understanding of the topic becomes crystal clear. We will let them express themselves therefore, they will gain confidence with math and it will be easier to do. Are you Ready for Math classes now??!!
